

The tempo of success

Construction of the Soyuz launch site is well advanced at the Spaceport in French Guiana

EXPERIENCE

Soyuz is the world's most utilized launch vehicle, having performed more than 1,700 manned and unmanned missions to date. Three highly successful flights of the increased-capability Soyuz in 2006 qualified this version for Europe's Spaceport in French Guiana, where it will join Arianespace's growing commercial launcher family.
