Nine Ariane 5s Launched In Twelve Months

Arianespace is living up to its unofficial motto: "launches speak louder than words." In the past 12 months, Ariane 5s performed nine missions that orbited 17 payloads - consisting of 16 telecommunications satellites and the first Automated Transfer Vehicle Jules Verne for the International Space Station. These flights lofted a combined total payload weight of 75,430 kg. Arianespace is ready to put its unmatched launch tempo to work for you.
