

Tempo of Success

The October 28th mission was Ariane 5's fourth heavy-lift launch this year

E I G H T

Ariane 5's successful launch of W3B and BSAT-3b brings the total number of geostationary satellites orbited by Arianespace in 2010 to eight, more than all of our competitors combined. This mission – which follows the Soyuz flight that orbited six second-generation Globalstar spacecraft eight days earlier – demonstrates our robust launch capability.
